

You must read, understand, and follow all of the below safety and other instructions above before proceeding.

IMPORTANT: Study these instructions and safety precautions carefully and in detail before you even handle your firearm or your Pistol Storage Device. Also, you must be absolutely sure that your pistol is fully unloaded (magazine removed and chamber empty) prior to beginning installation of your Pistol Storage Device. These precautions contain vital instructions and warnings regarding safe handling and use. If you do not follow these instructions and safety warnings exactly, you or another individual may suffer serious injury or death.

LEGAL DISCLAIMER: Improper installation and/or use of the Pistol Storage Device may create legal liabilities, including but not limited to a potential violation of the National Firearms Act. If the PSD is installed and used as it is designed and intended, however, it is the understanding of Pistol Mounted Solutions, LLC that such should be in compliance with federal law. Nevertheless, Pistol Mounted Solutions, LLC is not responsible for your installation and/or use of the PSD, and you are required to know and be responsible for any and all applicable federal, state, and local laws or regulations. Pistol Mounted Solutions, LLC cannot offer legal advice and/or recommendations, and you must retain competent legal counsel on your behalf if you desire such. Additional information regarding the proper installation and use of the PSD under federal law and ATF regulations can be found at www.pistolmountedsolutions.com.

KNOW YOUR GUN AND AMMUNITION: These instructions and warnings are issued for the Pistol Storage Device. The PSD is designed to be installed on a standard AR-type pistol containing a pistol buffer tube. AR-type pistols come in many different styles from many different manufacturers, both new and old. It is critical that you fully understand all characteristics of the particular pistol on which you plan to install the PSD. You should review the instruction manual for your particular pistol in detail and fully understand it before beginning installation of the PSD on your gun. You should follow each and every safety and other warning contained in the instruction manual for your particular pistol, and if you do not have a manual for your particular pistol, you should obtain one prior to installing the PSD on the gun. If you are unable to obtain a manual for your particular pistol, you should obtain training on your particular firearm from a certified gunsmith and/or other qualified trainer. In the event that there are any inconsistencies between your firearm's safety and instruction manual (or your training), the firearm's safety and instruction manual (or your training) must supersede any instructions regarding the PSD. In the event of such a situation, you must consult the manufacturer of the firearm and/or a certified gunsmith or trainer before proceeding. Failure to do so may result in serious bodily injury or death.

FIREARMS ARE WEAPONS AND ARE DANGEROUS: While the Pistol Storage Device is merely an aftermarket accessory and is not itself a firearm, it is intended to be installed on a firearm. Anytime you are around firearms for any reason, you must be aware of the basic rules of firearm safety because firearm safety is YOUR RESPONSIBILITY and must be your first and constant consideration. **KNOW YOUR GUN AND ITS HANDLING CHARACTERISTICS.**

FIREARM SAFETY WARNINGS: Most of these warnings apply to all types of firearms. These precautions must become second nature to anyone handling a firearm. They are not ranked in order of importance, and each and every warning/instruction should be followed at all times.

1. ALWAYS use the proper ammunition as specified by the manufacturer of your particular pistol.

2. ALWAYS keep the gun pointed in a safe direction. NEVER point a gun – loaded or unloaded – at anything you are not aiming at and are prepared to shoot. Your first action upon picking up a firearm should always be to check whether it is loaded.

3. ALWAYS assume that every gun is loaded and ready to fire until you personally establish that it is not. Know how to check any firearm to establish whether it is loaded. Know how to clear (this involves making sure the firing chamber and the magazine or cylinder are unloaded) any firearm you touch. NEVER rely on someone else's word that a gun is unloaded. CHECK IT YOURSELF.

4. ALWAYS keep a firearm unloaded until it must be ready for immediate use. Only loaded firearms can discharge accidentally or cause any harm.

5. ALWAYS carry any firearm pointed in a safe direction while it is being handled, due to the possibility of accidental discharge, ESPECIALLY when you are loading, unloading or operating any other mechanism of the gun. This is when most accidental discharges occur. Never let the gun point at you or others when you are manipulating its parts or at any other time.

6. NEVER rely on any mechanical safety or transfer bar. Mechanical devices can break or fail. FIREARMS SAFETY DEPENDS ON YOU, THE USER. No safety mechanism can prevent accidental discharge if it has been damaged by misuse or abuse, or is otherwise not properly functioning.

7. NEVER shoot at hard surfaces, water or randomly into the sky. Always select a place to shoot that has a safe backstop and is free from obstructions and water surfaces which could cause ricochets. There is no way to predict where a ricocheted bullet will go.

8. ALWAYS check the bore (inside the barrel) for obstructions BEFORE you load the firearm or whenever there is any reason to expect that a blockage may have occurred. NEVER attempt to check the bore without first unloading and disassembling the firearm to a non-functioning state. Firing any firearm with a barrel obstruction can lead to serious injury or death. Keep the bore free from rust and corrosion. Rust and corrosion can cause a sufficient obstruction to generate extreme overpressure upon firing, which may result in possible structural failure and serious injury to the shooter or bystanders.

9. ALWAYS wear proper safety-rated ear and eye protection when shooting. Ear protection reduces the cumulative and permanent hearing loss that results from unprotected exposure to gunfire. Use of impact resistant shooting glasses might protect your eyes in many circumstances where injury would result without them.

10. ALWAYS make sure all other persons are safely to the rear of the shooter and are wearing ear and eye protection as well as when discharging any firearm.

11. ALWAYS cease firing immediately if you have a misfire or notice any unusual sound or recoil while discharging the firearm. Unload the firearm and check the barrel bore for obstruction before resuming firing. A misfire can result in a barrel obstruction which is extremely dangerous.

12. ALWAYS be sure of your target and what is beyond it. Always insure that there is a safe "field of fire" and that your bullet will stop behind your target. You may miss the target. Be sure there is nothing you DON'T want to hit in the direction you are shooting. Bullets can glance off many surfaces and travel in unpredictable directions with considerable velocity.

13. NEVER cross obstacles such as fences or streams with a loaded firearm. Always make certain your firearm is unloaded before navigating any obstacle, including but not limited to crossing a fence, climbing a tree, jumping a ditch, etc.

14. ALWAYS hold or carry your gun so that you can control the direction of the muzzle if you fall or stumble. Dropping guns or allowing an impact to a loaded gun accounts for many accidental discharges.

15. NEVER pull a gun toward you by grasping its muzzle. If the gun accidentally discharges, it will be pointed at you.

16. NEVER mix any alcohol or drugs with shooting, including using alcohol or drugs before shooting. Never use your firearm if you are on any medication which impairs, even slightly, your mental or physical ability. It is unsafe and just plain stupid.

17. NEVER allow a firearm to be used by individuals who do not understand its safe operation or have not read the firearm's instructions and safety rules.

18. NEVER leave an unattended gun loaded. EVER. Store unattended guns unloaded and locked in a secure, clean, and dry place. ENSURE that unattended guns are beyond the reach of children, or any unauthorized user. Keep guns stored separately from ammunition. YOUR gun is YOUR responsibility.

FAILURE TO FOLLOW THESE INSTRUCTIONS OR FAILURE TO OBEY A SAFETY WARNING FROM THE MANUFACTURER OF YOUR FIREARM MAY RESULT IN SERIOUS BODILY INJURY OR DEATH TO YOU, TO OTHERS, OR TO THE FIREARM.

GENERAL INFORMATION AND MECHANICAL CHARACTERISTICS: Your Pistol Storage Device is manufactured using high grade materials. It has been designed to maximize ease of handling while incorporating reasonable safety features to reduce the chances of accident or mishap. If your PSD is not fully and properly installed, such failure may result in serious bodily injury and/or death. If you have any questions regarding the installation of your PSD, do not proceed. Stop and contact us and/or the manufacturer of your particular pistol, a certified gunsmith and/or a qualified firearms trainer before using your pistol with the PSD installed.

Regardless of the design features, a firearm or system such as the PSD must be handled with care and respect. Never rely entirely on mechanical features alone. Only your safe gun handling will ensure the safe use of your firearm. This is YOUR responsibility.

LOADING AND FIRING: Do not attempt to load or fire your pistol equipped with the PSD until you have read the manufacturer's instruction and safety warnings in detail and are completely familiar with its operation, handling characteristics, etc.

Pistol Mounted Solutions, LLC strongly recommends that you take a firearms safety class from a qualified and certified instructor. If you need assistance finding such an instructor in your area, please contact us and we would be more than happy to assist you with such. While we can help, firearms safety always remains your responsibility.

STORAGE: Always safely store and secure your firearm. For your safety and the safety of others, it is imperative that you keep your firearm locked and unloaded in a secure place. Safe and secure storage of your firearm is one of your most important responsibilities. It is a full-time responsibility. You must always secure your firearm and ammunition separately so that they are not accessible to children and/or other unauthorized persons. Your failure to follow these rules may result in death or serious bodily injury.

These instructions and warnings must always accompany your PSD and should be transferred with it upon change of ownership or possession. Additional or replacement copies may be ordered without charge at www.pistolmountedsolutions.com.

To review the letter from the ATF:

To view instructions online:

To maintain BATFE compliance the magazines must be inserted and removed in a perpendicular motion to the buffer tube of the firearm.

The BATFE has decided the PSD does not change the status of a pistol to a short-barreled rifle (SBR). Please don't be an idiot with our product by doing idiot things with our product.
